

HEINZMANN showcases the new generation of high-pressure Common Rail Injection Systems at MARINTEC China 2009

HEINZMANN presents, at Marintec 2009 in Shanghai, China from December 01 - 04, 2009, the new generation of high-pressure Common Rail Injection Systems called ODYSSEUS L and ODYSSEUS XL. These are tailored for large-bore medium-speed and high-speed engines. They offer a true alternative for Electronic Fuel Injection on the market and provide complete, safe and smart Common Rail solutions for your engine.

If you are considering project solutions for complete EFI Common Rail Systems customised to the needs of your engine application, HEINZMANN ODYSSEUS is the answer. HEINZMANN delivers the full package, ensuring optimum connectivity and compatibility: high-pressure injection components, after sales service, spares, electronic engine management & control systems, engine software, training in application software, maintenance & combustion optimisation as well as support in installation & commissioning, all over the world.

Cleanroom Production Area

We look forward to welcoming you at our booth 2 E-11-6 in hall W2, German Pavilion!

HEINZMANN (www.heinzmann.com)

Heinzmann GmbH & Co. KG is one of the leading suppliers worldwide in the field of mechanical and electronic Speed Control Systems for Diesel, Gas and Dual Fuel engines as well as for Gas Turbines. The product range includes system solutions for Air Fuel Ratio Control, Power Management, EFI, including Common Rail. They are used in genset, marine, agriculture, construction, locomotive and vehicle applications.

HEINZMANN's Electric Drive Division develops and produces various drive systems based on brushed and brushless DC-Disc Motors and Wheel Hub Motors for special purpose machinery and hybrid drive systems.
